Startup 5: Dynamic UI

Bugs: We had several issues with our code resulting in many bugs. The buttons do not work, and our page was not able to render after adding various server functions. To fix our issues we plan on reading up more on react and looking at examples. We hope to learn more about how to use the framework.

React Components:
- Nav bar has buttons for my events view, calendar view, creating an event, and logging out
- Right Sidebar renders the MyEventsList
- EventList renders events to be used throughout the campus map.
- MyEventsList renders the preferred events of the user on the right sidebar, the MyEvents page, and on the calendar.
- Users
- Event renders the event data.

Cut Components: We decided to cut the ability to save a drafted version of a new event, when using the create event page.

Contributions: Jason did the preparation work. We then mob programmed to create a server and a database file. The mock database is populated with relevant information to our app. The server has functions: getEventData, createNewEvent, removeEventFromMasterList, addEventToMyEvents, and removeEventFromMyEvents.
